PROFESSIONAL SUMMARY

Front-End Web Developer / Software Engineer with 7+ years building and testing performant, accessible production web applications across the full software development lifecycle. Specialized in JavaScript, TypeScript, HTML5, CSS3, and the Vue / Nuxt.js ecosystem, with a solid Node.js foundation. Combines hands-on development with uncommon depth in software quality and test automation (Selenium, Mocha, Chai) to ship reliable, well-tested, maintainable code. A Business Administration background adds a product mindset — weighing user, customer, and business impact to ensure each feature solves the right problem. B.S. in Computer Science with a Business Administration minor.

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, HTML5, CSS3, SQL

Frameworks & Libraries: Vue, Nuxt.js, Node.js, Express.js, AJAX, JSON/XHTML, SASS

Testing & QA: Test Automation, Selenium, Mocha, Chai, BrowserStack, Test Planning, Test Case Design, UI Automation, Defect Tracking

Databases: SQL, MongoDB

Tools & Platforms: Git, Bitbucket, Jira, Confluence, Visual Studio Code, Cursor, Vite, Netlify, WordPress, Claude Code, GitHub Actions & Copilot

Concepts & Methodologies: AI-Assisted Development, Responsive Web Design, REST APIs, CI/CD, UX/UI Design, Agile / Scrum, SDLC, WCAG Accessibility, SEO, Web Analytics

PROFESSIONAL EXPERIENCE

MIND Education — Irvine, CA

Jan 2019 – Jun 2026

Web Developer

Jul 2021 – Jun 2026

- Built and maintained a customer-facing EdTech platform in Vue, Nuxt.js, and Node.js that enabled PK-12 administrators and educators to monitor and manage students across an internet-based math curriculum.
- Translated product requirements into responsive, accessible UI with HTML, CSS, and JavaScript, delivering a consistent experience across devices and screen sizes.
- Developed and shipped customer-facing features in Vue and Nuxt.js, improving the usability and overall experience of the platform.
- Partnered with QA to triage and resolve defects before release, contributing to stable deployments and a seamless user experience.
- Continuously evaluated emerging front-end technologies and industry best practices, integrating improvements to enhance development workflows and platform reliability.

Quality Engineer

Jan 2019 – Jul 2021

- Supported the SDLC of learning-based math games using Agile / Scrum QA methodologies.
- Built and maintained automated UI test suites in Selenium with JavaScript (Node.js) to catch regressions before release.
- Integrated Mocha, Chai, and BrowserStack into the test pipeline to enable cross-browser automated testing.
- Isolated, reproduced, and tracked defects through resolution, verifying fixes against product requirements.
- Authored detailed, reproducible bug reports in Jira (with Git, Bitbucket, and Confluence) to speed developer turnaround.
- Wrote and ran SQL queries to validate data accuracy across game software products before release.

Internet Brands — El Segundo, CA

Jul 2018 – Jan 2019

Quality Assurance Intern

- Developed and executed automated test scripts that streamlined regression testing and reduced manual test effort.

- Conducted risk assessments and tracked quality metrics across web products to flag reliability issues before launch.
- Reproduced customer-reported issues and partnered with developers to verify patches, improving diagnosis accuracy and fix turnaround.

PTI Thermal Solutions — Santa Fe Springs, CA

Oct 2017 – Jan 2019

Web Designer

- Designed and maintained the company website in WordPress using HTML, CSS, and JavaScript.
- Implemented SEO/SEM and social media strategies to grow the company's organic traffic and digital presence.
- Applied UX/UI design principles to improve navigation, accessibility, and visual hierarchy; analyzed web-traffic data in Google Analytics to inform design decisions and measure impact.

PROJECTS

Swodeck Site Solutions — Personal Portfolio kswodeck.swodecksitesolutions.com

Apr 2024 – Present

- Designed and built a personal portfolio rendered as four fully independent front-end applications — Vanilla JS/TS, Angular, React, and Vue — each natively implemented and served at its own URL, a live demonstration of cross-framework proficiency.
- Architected a single shared content.json source of truth and a central TypeScript types layer consumed by all four apps (DRY), with shared theme-detection and content-fetching utilities imported rather than duplicated.
- Engineered a custom Node.js build pipeline that compiles all four framework builds in parallel via child processes into one deployable output, paired with a custom Vite dev-middleware plugin that serves live content for instant hot reload.
- Automated deployment with Netlify CI/CD on every push to master — parallel build, global CDN, and automatic HTTPS with sub-5-minute deploys.

CalcCrunch calccrunch.com

Nov 2025

- Designed, built, and solo-launched CalcCrunch.com — a fully static Astro + TypeScript (strict) site of 100+ free, registration-free calculators built for performance and SEO.
- Architected a data-driven system where content is structured JSON validated against typed interfaces, with a programmatic-SEO generator that turns one data row into a complete, schema-rich page.
- Wired a content-integrity gate into the CI build that fails on broken links, missing files, or malformed schema before anything ships.
- Engineered an autonomous GitHub Actions + Claude (Anthropic API) pipeline that researches topics, generates content, validates, and pushes to production on Netlify unattended.

Travel Beyond Boundaries

Sep 2024

- Built a content-driven travel blog with user-friendly navigation aimed at family, luxury, and budget travel audiences.

Real Estate Smart Choice

Feb 2024

- Built a real estate content site with WordPress, JavaScript, HTML, and CSS, and grew visibility through SEO and social strategies.

EDUCATION

Biola University — B.S., Computer Science; Minor, Business Administration

Jan 2015 – Dec 2018

Coastline Community College — Certificate, Mobile Application Development

2016 – 2018
